**Teletype Maintenance at Reseda, California**

1. Arrangements are in force that the Los Angeles Signals Center maintain the teletype equipment associated with the circuit between the Center and the FBI station at Reseda, California, which has been set up as a tributary, UWLDT, to UWL. There remains, however, the problem of installing and servicing four model 15 machines which have been supplied to the Reseda station for intra-building circuits to carry Morse code copy intercepted there. Since these circuits are not connected with the ACAN system, the Los Angeles Center requires special authorization to service them.

2. It is contemplated eventually to train members of the FBI Reseda staff to service this equipment, but the pressure of construction work makes it impossible to spare a technician to attend teletype school at this time. It is therefore requested that arrangements be made to have Los Angeles Signals Center install these machines during this current month and to service them, on a reimbursable basis, if necessary, until FBI has its own maintenance personnel.
